

JobFit Recalibration Command List

Manual Recalibration Commands – JobFit Assistant V2

It is important to use the exact capitalization of the command – no extra spaces, no dashes, etc.

For example: **Start New JobFit Session** to reset the process for a new session

Troubleshooting

Problem	Command	Purpose
Assistant Mis-formats output	Recalibrate	Re-enforces all configuration logic, formatting standards, and JobFit rule compliance.
You need it to regenerate a step's output	Restart from Step [X]	Redoes a specific step from scratch.
Assistant is “drifting” into other topics not related to the specific position	Re-lock Step [X]	Re-applies configuration enforcement to a previously confirmed step. Prevents drift or output corruption.
Use when switching to a new job or candidate	Start New JobFit Session	Clears memory and restarts from Step 1.0 using current configuration.
Use after timeouts, browser issues, or when returning later	Resume from Last Step	Recovers the session at the last confirmed step.
The Assistant may be missing a step or check	Run Configuration Audit – V2	Forces a step-by-step validation of setup, outputs, and enforcement compliance
You need help or need the command list	JobFit Help	Displays this command list for troubleshooting and manual control.
